

CONTENTS

<i>List of Figures</i>	ix
<i>List of Tables</i>	xi
<i>Preface</i>	xiii

1	The Foundation	1
	Structure and Function	1
	Homeostasis, Equilibrium, and the Steady State	7
	Physiological Gradients	9
	Physiological Reflexes	11
	Control Systems Analysis	13
	Feedback and Feedforward	15
2	Understanding the Mammalian Nervous System	18
	What Are Neurons?	18
	What Is the Nervous System?	19
	Neuron Communication, Electrical and Chemical Transmission	22
	Different Neurotransmitters and Their Locations and Functions	25
	Discomfort, Pain, and the Nervous System	29
	Mental Activity, Cerebral Blood Flow, and Health of the Nervous System	32
3	The Endocrine System and Physiological Communication	35
	Advances in Endocrinology	35
	Hormones, Proteins, and Peptides	39
	The Hypothalamic-Pituitary Axis	41
	Excesses and Deficiencies of GH and Health	44
	The Adrenal Gland and Growth	47
	The Thyroid Gland	48

4	The Cardiovascular System and the Blood	53
	The Blood	54
	The Heart and Cardiac Cycle	57
	The Blood Vessels	62
	Lifestyle and Monitoring Cardiovascular Health	68
	Reactive Hyperemia and Blood Flow to Organs and Tissues	72
5	Health and the Respiratory System	76
	Components of the Respiratory System	77
	Pulmonary Ventilation or Lung Inflation and Deflation	80
	Respiration, Exchange, and Transport of Blood Gases	83
	Central and Peripheral Regulation of the Respiratory System	86
	Lungs and Balance of Acids and Bases	89
	Lifestyle and Care of the Lungs	92
6	Kidneys and Renal Physiology	94
	Functional Morphology of the Kidneys	95
	Glomerular Filtration Rate and Urine	96
	Regulation of GFR and RPF	99
	Reabsorption, Secretion, and the Formation of Urine	102
	Renal Health, Hydration, and Urination	103
	Diabetes and Sugar in the Urine	105
7	The Gastrointestinal System	109
	Components of the Gastrointestinal (GI) or Enteric System	110
	Mechanics and Reflexes of the GI Tract	113
	Secretions of the GI Tract	115
	Digestion of Carbohydrates, Fats, and Proteins	119
	Health of the Oral Cavity and Vocalization	123
	Health of the GI Tract and Diet	125
8	The Reproductive System	128
	Gametogenesis, Genetic, Gonadal, and Phenotypic Sex	128
	The Sexually Indifferent Embryonic Gonad	130
	Spermatogenesis and the Male Reproductive System	132
	Oogenesis, Folliculogenesis, and the Female Reproductive System	133
	Sexually Transmitted Diseases (STDs), Sexual Behavior, and Infertility	136
9	The Immune System	138
	Cellular Defenses	138
	Chemotaxis, Margination, Diapedesis, and Phagocytosis	140
	Ports of Entry for Pathogens and the Reticuloendothelial System (RES)	142
	Immunity, Regenerative Medicine, and Stem Cells	145

CONTENTS

10	Muscle Function	151
	Muscle Diversification	151
	Excitation-Contraction Coupling in Muscle	153
	Cycling of Cross-Bridges and Shortening of Sarcomeres	154
	Muscle Levers, Hypertrophy, and Atrophy	156
	Muscle Diseases and Conditions	158
	Experimenting with Muscle	160
11	Integrated Physiological Responses	162
	Hypovolemic Hypotension	162
	Baroreceptor Reflexes and Cardiac Output	163
	Vasomotor Responses and Blood Pressure	165
	Renal Response and the Renin-Angiotensin System	166
	Blood Flow and Its Distribution and Redistribution during Hypotension	168
	Long-Term Responses to Hypotension	168
12	For the Record	170
	Blood Pressure and Your Health	172
	Blood Lipids and Physical Activity	174
	Blood Cells and Good Health	178
	Blood Sugar, Diabetes, and Metabolic Syndrome	180
	<i>Glossary</i>	185
	<i>Notes and Selected Reading</i>	199
	<i>About the Author</i>	209
	<i>Index</i>	211
